The Anatomy Coloring Book has been the #1 best-selling human anatomy coloring book! A useful tool for anyone with an interest in learning anatomical structures. The concisely written text features precise, extraordinary hand-drawn figures crafted for easy coloring and interactive study. Organized according to body systems, each of the 162 two-page spreads includes an ingenious color-key system linking anatomical terminology to detailed illustrations of the body. If a page confuses you, step back and look at the drawing(s) in context. Keep going back to larger and more expanded views until you are comfortable with that level; then go one level deeper. Informal seekers of self-realization and those with impairments have been drawn to The Anatomy Coloring Book because of its lighter, more visual approach to understanding.

This book is designed for and dedicated to you. We are offering instruction to a much broader audience than do typical texts, and there may be topics to be colored that are challenging to a first-year college student but not so challenging for a first-year medical or physical therapy student.
